

## Job Vacancy: Experienced developer / Architect

### Requirements:

The purpose of the Experienced developer /Architect is to participate in programming and make sure that the software architecture is sound and solid in regards to best practice and the development methods used. The Experienced developer / Architect will also be the bridge between developers, project managers, and business experts.

Main responsibilities include:

#### 1. Software development:

- Write clean, well-engineered code that conforms to accepted standards.
- Provide input into the design of software systems, offering advice and thoughts and providing feedback.
- Responsible for the production of software and the translation of specifications into physical software assets.
- Estimate the time and materials required to complete a project
- Utilise approved technologies for the development of systems.

#### 2. In regards to projects:

- Understand the goals and strategy behind each project from conception through completion.
- Work on projects developing efficient and effective systems in accordance with the context provided by the IT Project Manager.
- Help make sure each project meets or exceeds the goals we set out to achieve.
- Accurately report development activity through the Scrum process, identifying remedial action when required to address problems and keep development on track.
- Organise own time, schedule tasks for completion and deliver work to that schedule.
- Work independently and/or within a team as the work requires.
- Create and maintain strong working relationships with other members of the team and the wider technology organisation so that the overall function operates professionally and is seen as delivery focused

#### 3. Architecture responsibilities:

- Responsible for the design decision in regards to the software projects.
- Must be able to translate business requirements into software architecture and help the team understand the needed structure.
- Must focus on actions that produce results early while staying architecturally on course for the long term.

- Maintain and have up to date knowledge of software design, development methods and anticipate on technological evolutions
- Be able to communicate design choices to the team, project manager and business experts.
- Helps the team and the project manager make the right design decisions, analyses and fully understand the project and in collaboration with the lead developer designs the software.
